«Fungi selecti exsiccati ex Herbario Universitatis Halensis» is an exsiccata distributed by the herbarium of the Institute of Biology, Dept. of Geobotany and Botanical Garden of the Martin Luther University Halle (Germany), which is dedicated to non-lichenized fungi. Although it is not confined to selected fungal groups, special emphasis is put on microfungi in general and phytoparasitic micromycetes in particular, and the taxonomic groups of fungi which are subjects of scientific examinations at Halle will, of course, be reflected in this series of exsiccatae. It will not be issued in traditional fascicles of 20, 25 or 50 numbers, but in sets of 10 exsiccatae (decas), each number comprising 10 duplicates, which are dispensed on an exchange basis to selected herbaria (no.141–190 to BPI, BRIP, GZU, HMAS, K, KR, KUS, LE, M, PDD; an additional complete set is deposited at HAL – abbreviations according to “Index Herbariorum”).

Various interesting collections are included in this issue of «Fungi selecti exsiccati», e.g., isotypes of *Pseudocercospora marginalis* and *P. rhamnellae* as well as topotype material of *Pseudocercospora koreana*.
